

## IT MANAGEMENT AND SECURITY FOR AGRICULTURE

### Supporting AgTech

#### Helping you achieve greater productivity

Your computers, mobile devices, and data are critical to your operations. Our IT services provide you with the technology management and support you need to help keep your company's underlying technology running well.

#### Supporting every agricultural business

- Farm service suppliers
- Poultry and livestock farms
- Equipment dealers
- Greenhouse operations
- Cash crop operations
- Dairy operations
- Fish farming
- Co-Ops

#### Here's how we do it:

##### Our AgTech management model

The IT support process for farming operations begins with an assessment of your current setup – looking at things like hardware, software, internet connection, security measures, and data storage solutions that are currently in place. From there, our team can proactively maintain and secure the IT side of your operations, providing guidance on technology or security upgrades as needed. Additionally, we provide troubleshooting and incident response, helping you keep operations running smoothly.

## The strategy we employ to keep your IT systems running efficiently

- Continuous IT management, maintenance, and troubleshooting support
- New technology installation and setup assistance
- Security monitoring and operational management of IT systems
- Seasonal IT planning, predictive IT maintenance, and performance analysis
- Optimization solutions to help increase operational efficiency and productivity
- Software updates and the troubleshooting of connected devices
- Technical support for internet-connected farm equipment
- Secure data storage and management solutions

## How Managed IT Services benefit your business

- Data collection and analysis can help you gain insights into your operations to improve productivity and profitability.
- Mobile data and analytics can help you track productivity in real time, helping you identify and address issues quickly and efficiently.
- Well-managed automated systems can assist you with routine tasks, freeing up valuable time for more important activities.
- Modern communications enable you to stay connected with suppliers, customers, and stakeholders, facilitating better collaborative results.
