IT Systems Management for Manufacturing

Leverage a full team of IT professionals, so you can get back to what you do best

Manufacturing operations like yours are quickly moving away from relying on antiquated, legacy IT assets to embracing cutting-edge on-site and cloud options to improve efficiency.

With that level of dependence on technology, you need a full slate of IT resources tailored to your operations and organizational objectives. Our staff has invested the time and resources to understand manufacturing operational IT, and we have a track record of excellence in supporting companies with your kind of process complexity.

IT management for every aspect of your operations, all in one price

Within our fixed-price, subscription-based managed IT services offering, we deliver a full stack of IT care protocols.

- Network management and monitoring
- Security and system updates
- Cybersecurity management and monitoring
- Help desk support
- Incident response
- Endpoint management
- Disaster recovery and business continuity strategy
- Executive IT consulting
- Remote and on-site troubleshooting
- Mobile device management

Securing your evolution to Industry 4.0

Industry 4.0 allows manufacturing operations to stay competitive and achieve higher levels of efficiency. Many manufacturers have an eclectic mixture of old and new software, hardware, and databases – combined with specific ERP solutions and third-party software running various production systems. You need an IT partner with a proven track record of implementing excellent IT management protocols that protect without sacrificing the elasticity needed for your next stage of growth.

Why choose our fully managed IT services?

- Reliable IT support for incident response, IT questions, and troubleshooting
- C-suite IT advice, supporting your efforts to optimize operations and scale
- Peace of mind and confidence in your workflow based on our layered security protocols
- Mitigation of IT issues that create unplanned downtime and reduction of IT security risk

An IT support model well-suited to manufacturing

Dependability and predictability are crucial to your operations. Our managed IT services model provides both. In return for a stable, easily budgeted monthly payment, we deliver our full suite of continuous IT management and security services.

With our diligent team on your side, you will have access to the IT support you need for manufacturing process integrity. We take operational ownership of your IT, so you can focus your time on running the business and your next stage of growth.

An IT team that supports the next step in your evolution

Small manufacturing facilities can't think small when it comes to their IT support. You need an IT partner that can support your present operations, but also has the bandwidth to handle your IT expectations as you continue your digital journey. To stay ahead of the competition and meet market demand, it's critical that you have an IT management team that doesn't have to learn on the job. That's us.

- IoT
- Big data
- Enterprise analytics
- AI and machine learning

- Design 3D printing and VR
- Next-gen ERP solutions
- Cloud computing
