

IT Services for Transportation and Logistics

Streamlining your operations, protecting data and driving greater efficiency

Competition from niche carriers, a labor shortage, globalization, and rising customer expectations make it difficult for transportation and logistics companies to expand and generate more profit.

Our team of IT professionals can help alleviate the impact of these external pressures and provide the tools needed to stay competitive in your fast-paced industry.

- Logistics service providers (LSPs)
- Carrier companies
- Courier express parcel companies
- Enterprises with internal T&L operations

Protecting your operations

It's clear that the supply chain is a target of cybercriminals – that means your business is in their crosshairs. You have to minimize and manage the risks posed by ransomware, malware, human error, DDoS attacks, and more. The threats evolve continuously, and new ones appear on the horizon daily.

Our team implements robust cybersecurity tools and protocols throughout the layers of your IT workflow to give you the best chance of identifying and defeating cyberattacks. Our rapid response to real and potential cyber threats allows us to address and minimize risks associated with criminal intrusion into your systems or data access.

Managing your technology for greater efficiency and security

- Network management
- Mobile device management
- Cybersecurity management
- Cloud asset management
- Data management
- Vendor management
- IT compliance management

Modernizing your operations

Because your customer satisfaction is inextricably tied to the full function of your IT systems, it's vital that those IT assets are kept running at peak efficiency.

But the efficiency of your current systems isn't enough to keep pace with new and emerging competitors. Here's what our team can do to keep your team in the lead:

- Provide network reliability
- Integrate disparate systems
- Manage and monitor protective measures across all systems
- Automate manual processes
- Implement new and trusted technologies
- Support your adherence to regulatory requirements

Managing data across your operations

Siloed data can slow down your operations, and unsecured data can have catastrophic consequences. Let our team of data management specialists help you achieve data transparency and visibility throughout all your processes. Managed data is data that you can leverage to get goods to their destinations on time, track those goods, and maintain consistency for maximum profitability.

- Automated, regular, encrypted, cloud-based backups
- Mobile data management
- Data protection
- Data compliance
- Data resilience with business continuity management
